

Python

Python programming for biological data: from your first script to parsing sequence files, working with tables, regular expressions, and plots. The lectures build on each other and on the [UNIX lectures](#).

Lecture	Class
Python I: Values, Variables and Strings (PDF)	Oct 6
Python II: Decisions, Lists, Loops and Files (PDF)	Oct 8
Python III: Dictionaries, Sets, Tuples and Functions (PDF)	Oct 13
Python Workshop: Practice with Real Data (PDF)	practice
Python IV: Modules, Packages and Biopython (PDF)	Oct 20
Python IV: Tables with Pandas (PDF)	Oct 20
Python V: Regular Expressions (PDF)	Oct 22
Python V: Regular Expressions Worked Examples (PDF)	Oct 22
Plotting Data with Python (PDF)	

Related: Tabular data with DuckDB and SQL, Plotting with R, and the Python workshops in [Bioinformatics](#) (SNPs per gene, orthologs and gene networks).
